

The Nimble Thinker: Using all Your Gray Matter to Address Today's Gray Matters

presented by The Keystone Center

The Nimble Thinker, a customized training designed by The Keystone Center, captures the latest thinking in problem-solving. We trace insights gleaned from quantum physics, chaos theory, the new sciences and globalism to the emergence of right brain problem solving aptitudes as essential skills for addressing today's vexing problems. These skills are grounded in holistic thinking—emphasizing non-linear adaptive dynamics, our ability to synthesize information, and make unusual connections, as well as the importance of recognizing our fundamental interdependence.

The program is fast-paced, highly interactive, and will present theories, practices, and skills using a variety of visual media, role playing, and original exercises.

Our experienced training practitioners—who are also seasoned mediators and facilitators—can bring this program to your government agency, NGO, small business, or corporation and will tailor it to focus on the subjects that matter to you.

We offer one and two-day programs.

About The Keystone Center

Since 1975, The Keystone Center has been helping public, private, and civic-sector leaders solve complex problems and advance good public policy. We rely on our independence, our commitment to good science, and our skills in designing and leading consensus-building processes to establish new partnerships, reduce conflict, and produce policy agreements. At the same time, we're instilling in the next generation the skills, spirit, and respect for collaboration they'll need to become engaged citizens and informed leaders.
